

Advanced Digital Eye Examination

Valley Optometry Eyecare Center is committed to providing you with the best eye care using the latest advanced technology available. Our office offers an Advanced Digital Eye Exam that utilizes the Optomap Retinal Imaging and the iWellness Exam.

The Optomap Imaging is a 200 degree eye scan of your retina used to identify and monitor any eye disease. The iWellness Examination is performed on patients over 40-year-old and is like an MRI that measures the retinal and nerve thickness of your eye. With an annual Optomap & iWellness exams, we are able to better track your eye health for concerns, comparison, and treatments.

The doctor strongly recommends that **all patients** have this procedure performed annually. It is especially important for people who have:

- Headaches
- Flashes of Light
- Family History of: Glaucoma, Macular Degeneration, Retinal Disease, or Blindness
- Diabetes
- Floaters
- High Blood Pressure
- History of Retina Problems

Our Advanced Digital Eye Exam with Optomap Imaging and iWellness Exam can help you safeguard both your eyesight and general health. There is a \$30 copay for the Advanced Digital Eye Exam which is not covered with insurance.

(Please advise staff if you have a history of epilepsy.)

If you prefer to be dilated, then please allow an additional 45-60 minutes to your examination. Side effects of dilation can last to 4-6 hours and include: blurry vision and light sensitivity.

If you decline both the Advanced Digital Eye Exam and dilation, then please advise a staff. You understand that the potential for partial or total loss of vision may exist due to undetected eye disease and therefore release the doctors at Valley Optometry Eyecare Center from any liability resulting from failure to diagnose or treat any eye condition due to the lack of diagnostic information, which could have been obtained by performing this test.
